ChemCentric Helps BP Reduce Water Treatment Chemical Costs

Houston, TX - April 5, 2002 - In an effort to reduce their water treatment chemical costs, BP Chemicals (Alvin, TX) has selected ChemCentric's ChemClear brand of coagulants and flocculants to meet the water clarification needs at the BP Chocolate Bayou plant.

ChemCentric products were chosen on the combined basis of technical superiority and lowest cost. As a Tier 2 supplier, ChemCentric is able to provide BP with the best-available chemical technology at very competitive prices. ChemClear coagulant products will be applied at the plant's raw water clarification unit. Specially formulated ChemClear flocculants will be used at the plant's waste treatment facility to settle solids in the clarifier and to dewater sludge in the filter press.

ChemCentric's technical service personnel subjected the ChemClear products to extensive laboratory testing before submitting them to BP for field trials. A third-party service company was also used to conduct additional testing on several other suppliers' products before the ChemClear products were ultimately selected.

###

ChemCentric specializes in the custom-formulation of water treatment chemicals for the refining, petrochemical, and power industries. By integrating chemical, equipment, and information technologies, ChemCentric enhances the value of water treatment solutions. With more than 20 years of industrial experience, ChemCentric delivers results by custom-formulating products, openly disclosing ingredient levels, using the best-available raw materials, employing qualified technical service personnel, and by applying our proprietary Research & Development techniques. ChemCentric products and services are engineered to improve equipment reliability, increase production capacity, meet environmental regulations, and reduce the total cost of operation.
